

Precast Decorative Columns & Capitals Line

Complete Turnkey Business Proposal

Made-in-China supplier reference: real precast decorative columns & capitals line equipment.

approved sample market gate	selected moulds launch scope	cure test release gate	batch records traceability
---------------------------------------	--	----------------------------------	--------------------------------------

Prepared for investment planning in Afghanistan and regional export markets. Final specifications, pricing, civil works, and utility loads require supplier quotation and site survey.

Executive Summary

Produces precast decorative columns, capitals, bases and cladding segments from controlled cement/aggregate mix using prepared moulds, reinforcement where designed, vibration, controlled curing, demoulding, inspection and protected packing.

Why this project fits Afghanistan

- Approve a physical sample and the installation/structural detail.
- Start with the selected mould family only.
- Keep mix, cure and dimensional inspection records.

Sanaatchi delivery scope

- Factory setup planning, supplier pre-qualification, and technical comparison
- Complete production-line and individual equipment supply
- Factory layout, utilities, civil-work coordination, installation, and commissioning
- Raw-material sourcing, trial-batch qualification, and repeat supply planning
- International logistics, customs documentation, operator training, spare parts, and after-sales support

Recommended configuration

Launch with approved moulds and one tested concrete mix. Confirm dimensions, reinforcement, cure, lifting/installation details and local contractor demand before scaling.

Manufacturing Process & Product Portfolio

Integrated process flow

Target products

Product	Typical specification	Primary market
precast decorative columns, capitals, bases and cladding segments	Dimensions, mix density, reinforcement where designed, cure, surface finish, strength, edge quality and installation compatibility	Builders, precast contractors, housing compounds, retailers and local infrastructure projects

Confirm mould scope, reinforcement, concrete recipe, curing and acceptance sample before purchase.

Core Equipment Schedule

Step	Equipment	Function	Indicative parameter
1	Concrete mixer	Controls architectural mix	Colour/mix consistency
2	Column/capital moulds	Forms architectural geometry	Selected profiles
3	Vibration/cure area	Compacts and develops units	Cure-controlled finish
4	Handling/QC station	Releases installable pieces	Geometry/insert check

Equipment models are indicative and will be matched to the selected capacity, local raw-material tests, available utilities, and preferred automation level.

Plant, Raw Materials & Utility Requirements

Raw materials

- Cement, graded sand/aggregate, water, approved admixtures, pigments/release agent where used, reinforcement/fixtures where designed and packaging

Utilities & infrastructure

- Reliable water/power, covered curing and level mould beds
- Guarded vibration/lifting tools, drainage and documented maintenance

Quality, safety and environmental controls

- Check symmetry, vertical alignment, surface finish and joint details
- Use engineered reinforcement/lifting/anchoring for heavy sections
- Confirm load, connection and installation method with the project engineer

A final factory layout must reserve safe forklift routes, maintenance clearances, raw-material segregation, finished-goods storage, fire protection, ventilation, and future expansion space.

Indicative Investment & Implementation Plan

LOW-ENTRY CONFIGURATION

Columns and capitals require connection and lifting design, not only attractive moulds.

Component	Indicative range	Notes
Mixing, moulds and vibration	US\$12k-45k	Selected architectural forms
Cure, handling and finish	US\$10k-40k	Heavy-piece handling scope
Indicative entry total	US\$30k-100k	Engineering/installation excluded

Implementation sequence

Phase 1	2-5 weeks	Confirm product specification, representative raw material, buyer, capacity, site and utilities
Phase 2	3-7 weeks	Run supplier trials with the buyer material and freeze the balanced machine, tooling and utility scope
Phase 3	8-22 weeks	Manufacture or refurbish, inspect, document and ship the contracted equipment
Phase 4	3-12 weeks	Install, commission, train operators and pass material-specific acceptance tests

Ranges are planning targets for a low-cost entry configuration, exclude land, and remain subject to confirmed capacity, supplier quotation, freight, duties, exchange rates and site conditions.

Next Steps & Contact Information

Recommended next steps

- Confirm target products, hourly output, and packaging formats
- Test representative raw materials and document quality requirements
- Complete site survey covering electricity, water, fuel, drainage, roads, and warehouse space
- Request comparable technical and commercial quotations from shortlisted suppliers
- Finalize financing, logistics, installation, training, and spare-parts plan
